Raza Faraz

Toronto, Ontario +14379674880 razafaraz razafaraz96@gmail.com razafaraz

Software Engineer with **6+ years of experience** building scalable, performant web apps with a strong focus on frontend architecture, design systems, and performance optimization using **React**, **TypeScript**, **Next.js**, **Node.js, Golang,** and **Kotlin/Java.** Recognized for customer-focused design, clean code, and **cross-team** collaboration in **agile** environments. Canadian PR holder, recently relocated from Germany to Canada (**no sponsorship needed**)

PROFESSIONAL EXPERIENCE

Senior Software Engineer, November 2025- Current
Thomson Reuters - Materia AI Toronto, Canada

- Part of **Thomson Reuters' AI division** developing CoCounsel for Accounting, shipping an AI-powered research assistant enabling accountants and auditors to query complex tax and accounting questions with cited, actionable answers
- Enhanced **API performance by 6%** by eliminating unnecessary serialization/deserialization and redundant object wrapping in the Python backend middleware
- Initiated Storybook integration to establish a unified design system across the team
- Used ReactJS, Typescript, Next.js, Python, PostgreSQL, RAG system

Senior Software Engineer July 2024 – September 2025
HelloFresh Berlin

- Member of the Food Systems Alliance team that built an internal recipe management platform used by recipe developers to create and serve millions of meals globally
- Authored a **cross-team RFC** to eliminate redundant logic, reducing API **payload sizes by 35%** and improving **frontend performance by 10%**.
- Took initiative to contribute to the **Golang backend** during feature development, implementing business logic and integrations within the existing architecture.
- Led HelloFresh's Australia & New Zealand launch by gathering requirements, stakeholder coordination, and planning, resulting in an early, **low-bug rollout** praised for its speed and execution.
- Drove Google Analytics (GA4) adoption across key workflows, enabling OKR planning and data-driven strategy.
- **Collaborated with UX** and product teams to redesign **20+ workflows** based on user feedback and behavioral analytics, **reducing recipe creation time by 10%**.
- **Built and maintained components** for an internal design system adopted by 4 product teams.
- Coordinated cross-timezone projects and supported teams and customers across Europe and North America.
- **Mentored** junior engineers through pair programming, architectural discussions, and technical growth support
- **Interviewed** engineering candidates, evaluating coding and system design skills in collaboration with hiring managers.
- Used ReactJS, Typescript, Next.js, Golang, Statsig, Monorepo, Microservices, Google Analytics (GA4), PostgreSQL

Software Engineer July 2022 – May 2024
Personio / Europe's leading and largest HR software solution Munich

- Part of Personio's Marketplace Experience Team, streamlining and connecting Personio's ecosystem to external tools like Slack and Greenhouse for improved client experience.
- Led and executed a complete overhaul of the integration enrollment process, resulting in a **32% reduction in drop-off rates** through strategic process optimizations.
- Achieved a **30% reduction in load time** on Personio's most user-visited dashboard, enhancing user experience**.**
- Introduced a team-wide shift from manual UI-based synthetic tests to **Kotlin-based** synthetic testing**,** significantly improving test reliability, thereby **setting a new benchmark for quality assurance**.
- **Led the architecture** and implementation of multiple micro-frontends using Nx, driving a consistent codebase structure across teams and improving reusability.
- Introduced a team-wide Architecture Design Record **(**ADR) to optimize global state usage, **enhancing code quality**, application performance, and maintainability, while also **boosting efficiency**.
- **Onboarded new engineers** to the team, while also creating comprehensive onboarding documentation and videos to familiarize them with common workflows and pipelines.
- Implemented and managed **A/B tests** using feature flags, enabling user behavior analytics.
- Worked on ReactJS, TypeScript/Javascript, Kotlin/Java (Spring), Datadog, Sentry, Docker, microservices,

Software Engineer May 2021 – July 2022
Funavry Technology Islamabad

- Designed and built scalable frontends and APIs across **3 client projects**.
- Defined **frontend architecture** and integrated reusable components for rapid delivery.
- Worked on ReactJS, NodeJS, Typescript/Javascript, React Native, AWS

Full Stack Engineer January 2020 - Jan. 2021
ISSD Ankara

- Oversaw the migration of legacy systems (Angular/C++) to a modern full-stack using React and Node.js.
- **Enhanced system performance by 23%** through the implementation of modern practices and technologies.
- Worked on ReactJS, Angular, NodeJS, Typescript/Javascript, AWS

TECHNICAL SKILLS

Languages & Frameworks: ReactJS, Next.js, TypeScript, JavaScript, Node.js, Golang, Kotlin, Java, HTML5/CSS
Tools & Platforms: AWS (Amazon Web Services), Docker, Sentry, Datadog, Statsig
Testing & Monitoring: Jest, Cypress, Google Analytics (GA4)
Database: PostgreSQL, MySQL, SQL
Architecture & APIs: REST, GraphQL, Microservices, Monorepo, Micro Frontends, API Design,
Development Practices: Agile (Scrum), A/B Testing, Feature Flags, Accessibility (WCAG)

PROJECTS

Personio Onboarding/Offboarding Widget - Personio June 2023 – July 2023

- Led the migration of the onboarding/off-boarding widget from monolith to monorepo.
- Collaborated with cross-functional teams to gather requirements and formulate a detailed action plan.
- Launched a micro frontend for Personio's dashboard, integrating it with the NextJS orchestrator main page.
- Enhanced Personio's user experience by achieving a **30% reduction in LCP**.

EduOpenings – Mobile Application | React Native | TypeScript May 2021 – June 2022

- An app where educators can find jobs, freelancing work, and professional development, much like LinkedIn.
- Integrated Apple/Google Signin, Google Maps, and other third-party libraries to enhance app functionality.
- Achieved more than **1000 active users** within two months. Project Link: Google Play Store.

Automated Watering System - Internet of Things (IoT) Project | Personal Project

- Plant hydration control system, which activates automatically based on soil moisture or input via the internet
- NodeJS, ReactJS, C, MYSQL, were used for development

EDUCATION

Bachelor of Science in Computer Engineering | Bilkent University, Turkey 2015 - 2019
